COURSE HIGHLIGHTS

• Review clinical neurophysiology techniques and topics, including: basic physiology, pathophysiology, electroencephalography, evoked potentials, electromyography, movement disorders and intraoperative monitoring.
• Focus on clinical correlation of various neurophysiological tests used for patient evaluation regarding epilepsy, sleep disorders, movement disorders, peripheral nerve and neuromuscular disorders.
• Presenters are faculty members of the Mayo Clinic College of Medicine from the Departments of Neurology in Jacksonville, FL; Rochester, MN; and Scottsdale, AZ.
• Three Demonstration Workshops included for all EMG participants:
  – Nerve Conduction Studies
  – Needle EMG
  – Miscellaneous NCS/EMG

LEARNING OBJECTIVES

Upon conclusion of this program, participants should be able to:

• Identify commonly encountered interictal and ictal epileptiform findings on EEG.
• Review benign variants commonly mistaken (over-read) for epileptiform activity on EEG.
• Distinguish epileptiform activity from non-epileptiform activity seen in EEG.
• Interpret the findings and clinical significance of abnormalities on EEG studies.
• Evaluate reading skills of routine EEG, recognizing potentially confounding normal variants, artifacts and normal waveforms versus epileptiform activity.
• Recognize and interpret the significance of EMG waveforms on needle EMG.
• Develop a logical approach to the use of standard clinical electrophysiological techniques in the evaluation of common and uncommon neuromuscular disorders.
• Develop an approach to the use of the EMU.
• Identify common treatments using Botulinumtoxin in Neurophysiology.

TARGET AUDIENCE

The audience for this course will be practitioners (MD, DO, NP, PA, RN) interested in the clinical practice of neurophysiology, including both basic and advanced theory and practice. Practitioners looking for a comprehensive review of the CNP or wishing to advance their knowledge base in these areas are encouraged to attend.
