Target Audience

This continuing education (CE) session was planned to meet the needs of professional staff who deal with the selection and monitoring of medication(s) as part of their patient care duties, including: pharmacists, RNs, APRNs, PAs, MDs.

Activity Overview

In December 2020, the FDA authorized Pfizer's COVID-19 vaccine for emergency use, followed only weeks later by emergency authorization for a different COVID-19 vaccine produced by Moderna. The new mRNA vaccine technology, public demand for immunizations, and scale of COVID-19 immunization efforts have presented significant challenges that have been overcome through concentrated efforts from organizations and pharmacy departments. During this session pharmacy-related COVID-19 immunization challenges and solutions will be discussed, along with challenges we can expect to see in the ever-changing landscape of the COVID-19 pandemic.

Learning Objectives

At the conclusion of this knowledge-based CE session, participants should be able to:

1. List three differences between COVID-19 immunization efforts and previous mass immunization strategies.
2. Describe challenges in complying with vaccine delivery, storage, and administration processes required by FDA emergency use authorization.
3. Summarize the current state and future directions of COVID-19 mass immunization efforts.
