Target Audience

This continuing education (CE) session was planned to meet the needs of professional staff who deal with the selection and monitoring of medication(s) as part of their patient care duties, including: pharmacists, RNs, APRNs, PAs, MDs.

Activity Overview

There have been incredible advances in oncology care over the past several decades, but these advances are matched with increased cost of therapy. Cancer is the second most expensive disease in the U.S. with an estimated health care cost of \$157 billion in 2020. Approximately 5% of the U.S. population are cancer survivors that have to manage this financial burden. Financial toxicity describes both the direct and indirect health care costs that affect patients and caregivers. During this presentation, we will review the background of financial toxicity, its impacts on clinical outcomes, and proposed methods to address this issue with patients.

Learning Objectives

At the conclusion of this knowledge-based CE session, participants should be able to:

1. Review the definition, background, and measurement of financial toxicity
2. Discuss the impact of financial toxicity on patients' clinical outcomes
3. Identify methods to help patients make informed decisions about their oncology care
