## Primary Treatment for Multiple Myeloma: Three is Company, is Four a Crowd?

**Session Date:** 08/17/2021

**Session Time:** 11:00 – 11:45 AM (CST)

### Target Audience

This continuing education (CE) session was planned to meet the needs of professional staff who deal with the selection and monitoring of medication(s) as part of their patient care duties, including pharmacists, RNs, APRNs, PAs, MDs.

### Activity Overview

The standard of care for primary treatment of multiple myeloma has been a three-drug regimen followed by autologous stem cell transplant. Recent literature supporting use of four drug induction regimens have now provided additional options. The NCCN multiple myeloma panel includes both three-drug and four-drug regimens into their treatment algorithm with no clear guidance on which to choose. This presentation will review recent literature to determine when these four-drug regimens should be utilized.

### Learning Objectives

At the conclusion of this knowledge-based CE session, participants should be able to:

1. Identify signs, symptoms, and diagnostic criteria for multiple myeloma
2. Review pharmacology of medications used as primary treatment for multiple myeloma
3. Discuss recent literature regarding four-drug regimens
