stentfix OTSC® System

Preventing stent migration

- New clip design adapts to the wall
- Allows proximal and distal fixation
- Dedicated cap shape for easy positioning on the stent edge
OTSC®
STENTFIX

stentfix OTSC® System

The stentfix OTSC® System is the innovative solution for stent fixation in the digestive tract. It is a specially designed OTSC® System and labeled for the fixation of self-expandable metallic stents (SEMS).

The round design of the stentfix OTSC® clip adapts perfectly to the gastrointestinal anatomy. Due to the modified cap shape, stentfix OTSC® can easily be aligned to the stent opening for optimal stent mesh and tissue capture by the clip.

The compact design of the stentfix OTSC® System also allows the passage through a stent (from Ø 18 mm), therefore, fixation is possible either on the proximal or distal end.

Measurements

stentfix OTSC® System Set (ref. no. 100.50)

Application

Proximal fixation of the stent – Clinical example*

Align clip tooth rows parallel to stent opening, so that tissue and stent mesh are evenly captured. Mobilization of tissue by suction.

Optimal adaptation of the clip to the wall.

Distal fixation of the stent – Demonstration on Ex-vivo model

Align clip tooth rows parallel to stent opening, so that tissue and stent mesh are evenly captured. Mobilization of tissue by grasping below the stent meshes.

Optimal adaptation of the clip to the wall.
