

Hip Arthroscopy Solution

Iconix

The ICONIX all-suture anchor platform is designed for precise anchor placement.

HipCheck

HipCheck is an intra-operative resection planning and execution tool that allows surgeons to measure and resect cam lesions to a desired alpha angle.

HipMap

HipMap is a pre-operative planning tool that delivers a patient-specific, interactive 3D representation of the hip designed to assist with clinical decision making.

Pivot Guardian

Pivot Guardian is the industry's first post-free hip distraction system designed to mitigate post-related complications and reduce heel slip during hip arthroscopy.

TransPort & FlowPort

TransPort and FlowPort cannulas were designed to protect soft tissues while providing access to the central, peripheral, and lateral compartments to treat hip pathologies.

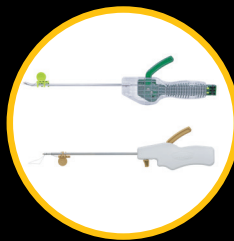

Portal Entry Kit

The Portal Entry Kit contains all disposable instrumentation needed for joint access during hip arthroscopy.

Samurai Blade

The Samurai Blade is designed to cut through thick, capsular tissue.

CinchLock SS & CinchLock Flex

The CinchLock and CinchLock Flex Knotless Suture Anchor Systems provide speed & simplicity with their "One-Click Lock and Release" anchor deployment systems.

NanoTack Flex

The NanoTack flex system facilitates the placement of a compact, 1.4mm anchor in multiple trajectories through a straight and curved guide.
