Protect Patients

The Sterile-Z® Patient Drape is designed to protect the intraoperative patient during imaging and help maintain sterility during removal. It is the only solution designed to be a patient centric protection drape that can be applied and removed in seconds, without contaminating the sterile field.²

Application takes under 30 seconds.²

- Deploys quickly to help protect the sterile field from contamination during imaging without compromising visualization
- By encompassing the patient, the drape wraps neuro-monitoring wires, foley catheters, and other tubing under the table thereby preventing inadvertent dislodgement
- May help improve efficiency of positioning the equipment

Removal takes just 5 seconds.²

- The drape separates quickly following imaging with its patent-pending “Z-Fold,” and is removed from the table
- Efficient removal allows OR staff to continue surgery without delay

The Sterile-Z® Patient Drape is compliant with AORN Guidelines, which state:

When sterile fields are covered, they should be covered in a manner that allows the cover to be removed without bringing part of the cover that falls below the sterile field above the sterile field.¹

Defend the Sterile Field with STERILE-Z®
With its simple design, Sterile-Z®...

■ Helps prevent contamination
  Maintains the sterile field during use and removal with its patent-pending Z-fold technology

■ Allows for focus on the patient
  Provides a sterile barrier for the patient, to help reduce the risk of infection

■ Easy to use
  With its simple design, Sterile-Z® Patient Drape can help reduce wasted time in the OR
