

Biodesign® biologic graft surgical portfolio

Overview

Cook Biotech Incorporated has been a leader in regenerative medicine and biomaterials for more than 25 years. We partner with surgeons, academic institutions, existing companies, and start-up companies to develop and provide life-improving medical devices.

Our biologic products are manufactured in the US from porcine small intestinal submucosa (SIS). True to our mission, "We serve patients," Cook Biotech has distributed more than 6 million SIS products around the globe to improve patient lives.¹

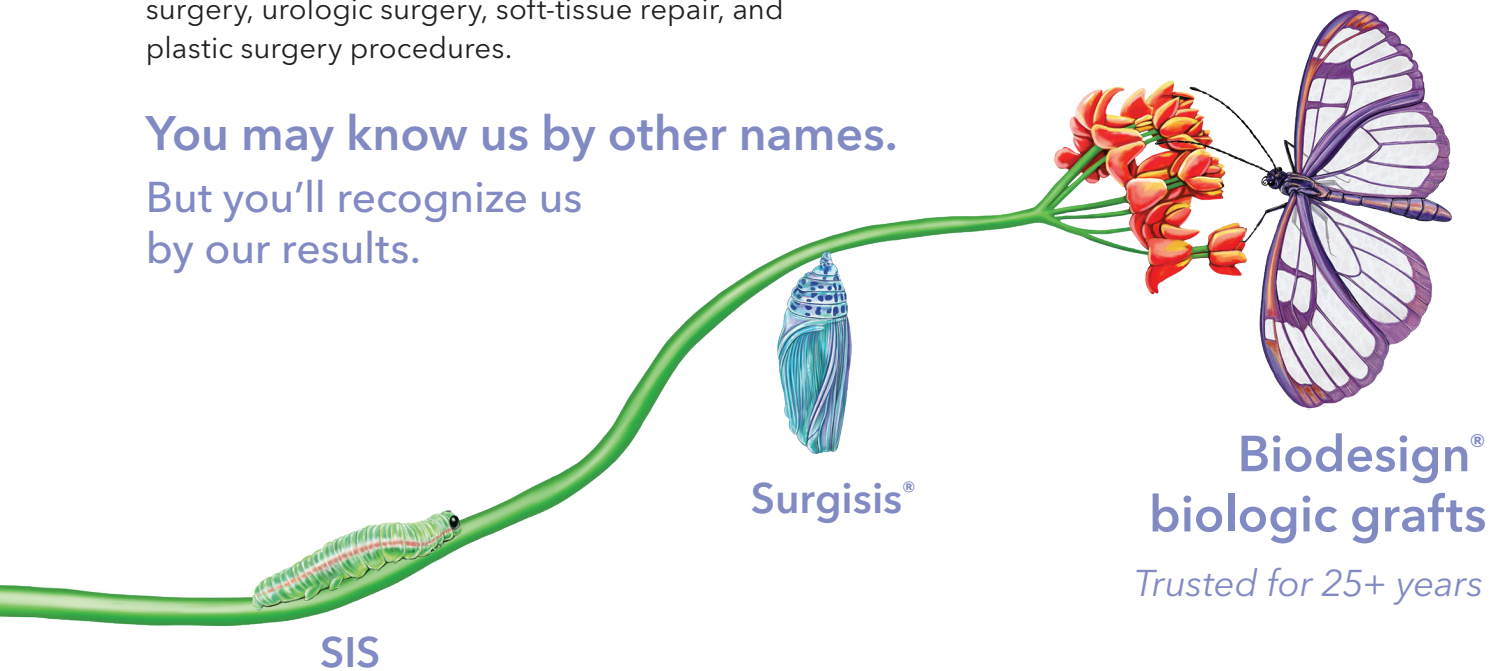

Cook Biotech's comprehensive Biodesign biologic graft surgical portfolio includes products tailored for general surgery, colorectal surgery, urologic surgery, soft-tissue repair, and plastic surgery procedures.

Benefits of Biodesign products:

- Manufactured in the US
- Biologic xenografts made from porcine SIS
- Non-cross-linked, non-dermis
- Easily hydrated in the operating room
- No special orientation or sidedness
- Suitable for use in open, laparoscopic, or robotic procedures
- Do not require AABB tissue tracking
- MRI safe
- Off-the-shelf grafts that do not require special storage

You may know us by other names.

But you'll recognize us by our results.
