

# ACTIV SIGHT

## Intelligent Light See Beyond the Visible

ActivSight™ Intelligent Light is the first and only modular form-factor with multimodal Advanced Visualization. ActivSight allows surgeons to augment their senses using augmented reality overlays.

## Enhanced Patient Care

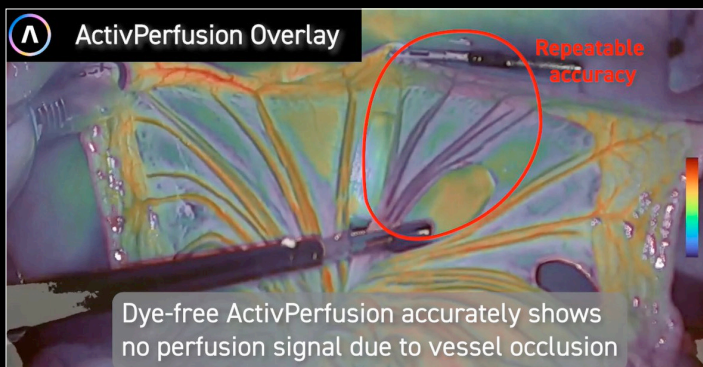

Critical structure identification and tissue perfusion assessment are essential for patients to have the best possible chance of healing well without facing life-threatening or costly complications.

Surgeons can “see” otherwise imperceptible tissue perfusion with ActivPerfusion™ Mode. ActivICG™ Mode allows surgeons to visualize ICG (Indocyanine Green) in critical structures, such as bile ducts, using familiar techniques.

## System Compatibility

Advanced visualization should be available to every patient who stands to benefit from it, and our business model reflects this.

Designed to be a routine part of surgical practice, ActivSight is engineered to work with existing laparoscopic and robotic systems. ActivSight requires no capital purchase with a subscription based cost of ownership.

## Real-Time Data

ActivSight's Intelligent Light provides advanced visualization in real-time.

Designed with ease of use in mind, surgeons are able to access ActivPerfusion Mode with the push of a button and instantaneously see blood flow. Real-time data allows surgeons to quickly assess tissue perfusion and make important decisions.

# Designed to address the most serious, costly patient complications.<sup>1-19</sup>

## 15%

### Colorectal Surgery

- Leak rates up to 15% cited in literature
- \$30,000+ cost to healthcare systems per leak
- 12 days additional length of stay

## 8%

### Bariatric Surgery

- Gastric Bypass leak rates up to 8% cited by the ASMBS
- An additional \$66,000 per leak
- 15 days additional length of stay

## 20%

### Esophagectomy

- Leak rates of 20% cited in recent literature
- 12-25% readmission rate
- 7-73 days additional length of stay

“ActivSight allows you to see beyond the human visual spectrum. Things they couldn’t see before. For instance, repeatable on-demand perfusion assessment through the procedure.”

— Dr. Peter Kim, Activ Surgical Founder and CSMO
