

Talia Drayton

Drayton Health Systems

Talia Drayton is the founder of Drayton Health Systems and the creator of F.A.V.E., an adaptive healthcare implementation system that helps organizations translate clinical guidance into personalized, real-world action. Her work sits at the intersection of instructional design, patient experience, and systems engineering, with a particular focus on what happens after patients leave the clinical setting and must carry a care plan into everyday life.

Talia brings more than a decade of experience in learning and performance design. Her work includes developing curricula for more than 30 universities and serving as a recurring guest lecturer and course collaborator at the University of South Florida College of Public Health. An internationally award-winning curriculum designer and part-time farmer, she is passionate about using systems design to improve how people learn, change, heal, eat, live, and follow through.
